

Petrosea Introduces Rainwater Utilization Innovation to Expand Access to Safe Drinking Water in Sorong

Jakarta, 29 October 2026 – Access to safe drinking water remains a challenge for some communities in Sorong, Southwest Papua. To help address this need, PT Petrosea Tbk (IDX: PTRO) has introduced PetroHygiene – Rainwater to Drinking Water Initiative, a social innovation that transforms rainwater into an alternative source of drinking water through a system designed to collect, store and treat rainwater to support the community's drinking water needs.

Developed under the environmental pillar of Petrosea's Corporate Social Responsibility (CSR) program, PetroHygiene reflects the Company's approach to delivering solutions that address community needs while optimizing the use of natural resources. The program utilizes a 350 m² rainwater catchment area, including an effective harvesting area of 84 m², with a rainwater capture capacity of 2,658.18 liters, a production capacity of up to 637.96 liters per day, and a storage capacity of 2,000 liters.

Since its implementation, PetroHygiene has directly benefited approximately 85 families. In addition to improving the availability of water for daily needs, the program delivers environmental, health and economic benefits. Rainwater harvesting helps reduce surface runoff, while program monitoring has indicated an approximately 66% reduction in water-related health issues. From an economic perspective, PetroHygiene has the potential to reduce household spending on water by up to 98%, with total estimated savings of approximately Rp359 million annually for beneficiary families.

"Through PetroHygiene, we aim to demonstrate that impactful innovation can begin with harnessing locally available resources to develop practical solutions. For Petrosea, the success of a program is measured not only by the technology implemented, but also by the benefits it delivers to communities and the environment. We hope this initiative can be further developed and inspire the adoption of similar solutions in other areas," said Meinar Kusumastuti, Director of PT Petrosea Tbk.

The PetroHygiene initiative received the Gold Award in the Social Innovation category at the Environmental and Social Innovation Awards (ENSIA) 2026, organized by PT SUCOFINDO (Persero) in September 2026. The award recognizes Petrosea's efforts to develop environmentally based solutions that address community needs while delivering tangible health, social and economic benefits. This achievement further encourages Petrosea to continue developing social innovations that respond to community needs and support environmental sustainability.

All of Petrosea's operational and financial performance targets are supported by a strong Safety, Health and Environment (SHE) culture through the implementation of target zero accident, operational excellence and continuous improvement, as well as risk management and Good Corporate Governance (GCG) factors as the backbone of the Company's sustainability.
